Introduction

CashPlug is a blockchain-based payment gateway for nearly everything, including, web API, image, video, streaming, audio, text. CashPlug is simple and fast, working as plug-and-pay. Each item can be monetized via CashPlug, and then embedding customized item to target website. The client is able to unlock the paywall via built-in wallet of browser. The overall process is registration-free, peer-to-peer and secured, credited with blockchain technology. No expensive credit card processing fee, no slow and complicated applying process. It enables the possibility for micro-payment for digital collectible items. It enables pay-per-service business model. It enables reward like appreciation token. It enables copyright tracing. CashPlug is the most appropriate payment solution for all types of web service.
